DETAILED ACTION

This action is in response to the applicant's communication filed on 5/10/2005.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 20-25, 27 are rejected under 35 U.S.C. 102(a) as being anticipated by Ihm (US 2002/0076846 A).

Ihm teaches a product of producing carbon nanotubes or fullerenes and then coating the carbon nanotubes with III-V semiconductor material such as gallium nitride (GaN) or titanium dioxide TiO₂ and such GaN semiconductor materials are well known to use for light emitting devices in ultraviolet region(see abstract, fig.2 and related description, para 0021). Ihm teaches coating any semiconductor material and exemplified with GaN.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 2812

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 26 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ihm et al in view of Shultz (US6,126,740) .

Ihm particularly does not mention coating with II-VI materials such CdS or CdSe.

However, forming nanoparticles of CdS or CdSe are well known as taught in Shultz et al (see abstract and col5, lines 39-52). It would have been obvious to one of ordinary skill in the art to coat CdS or CdSe materials as alternative to GaN materials for semiconductor devices because CdS or CdSe nano particles are useful semiconductor devices as suggested by Schllz et al .

Allowable Subject Matter

Claims 1-19 are allowed.

The following is an examiner's statement of reasons for allowance: Prior art neither teach nor suggest " a method making a semiconductor coated nanoparticles comprising: dispersing the nanonparticles under suitable conditions to provide a dispersed nanoparticles; and depositing at least one semi conducting material under suitable conditions onto at least one surface of the dispersed nanoparticles to produce the semiconductor nanoparticles."

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
